

SignalFisher

The Cyber Resilience Shield

A live security testing program delivered through an intelligent platform built by cyber security experts for users at every level.

Confidence from Coverage

Scope

Our expert-led testing program takes the burden of context gathering, strategy, and planning off your plate. By continuously re-evaluating your business priorities, industry requirements, critical processes, regulatory requirements, and evolving external threats, we ensure testing remains relevant and delivers actionable insights. Learnings from previous tests build over time, making the program smarter with every cycle and allowing testing scope and priorities to adapt as your environment changes.

Test

The program combines a carefully vetted network of skilled security researchers with best-in-class testing methods and tools to deliver high-quality insights. Using business context, previous learnings, and AI-assisted matching, we deploy the right researchers against the right assets to ensure relevant, comprehensive coverage. Our cyber security experts oversee the entire process, eliminating the burden of vetting researchers, defining testing policies, and managing individual testing activities.

Interpret

Our intelligent platform transforms testing results into actionable insights by applying your business context and relevant external factors to dashboards, reports, severity rankings, and prioritized action items. From executive-level overviews to detailed technical findings, every stakeholder gets the information they need to make informed decisions. Real-time notifications and integrations deliver relevant insights directly to the right teams and existing workflows, reducing the time between identifying vulnerabilities and taking action.

Adapt

The Cyber Resilience Shield never stops learning and never stops adapting. All relevant aspects of your business and industry context are continuously monitored. New knowledge triggers any necessary program adaptations to ensure scope, testing, and interpretation are always up-to-date. In a world that never stops changing, the ability to adapt quickly helps your business to be more resilient every day.

Deep Industry Experience. Intelligent Security Testing.

Finance

Intelligent testing that keeps pace with evolving fraud tactics and tightening compliance demands

Insurance

Protecting sensitive policyholder data with testing that adapts to regulatory and threat challenges

Government

Security testing programs built for public-sector scrutiny, compliance, and citizen data protection

Utilities

Safeguarding operational systems where downtime and disruption are not an option

Critical Infrastructure

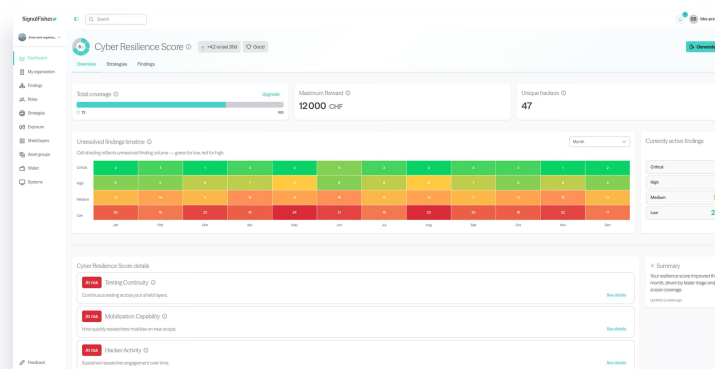

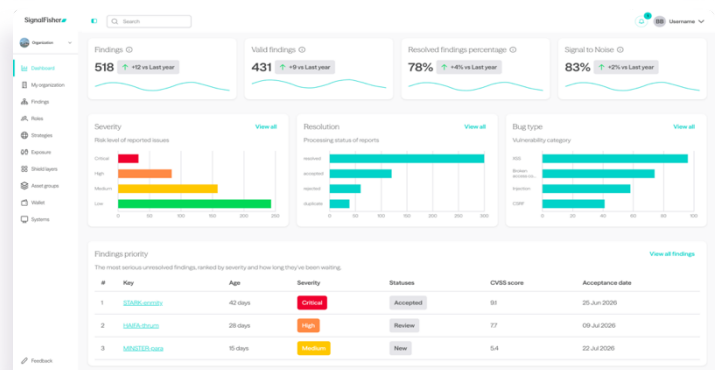

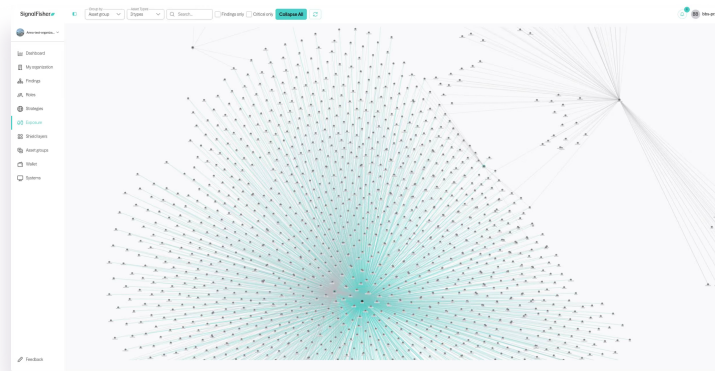

Relentless testing for the systems society depends on, tuned to sector-specific threats

Healthcare

Keeping patient data and connected medical systems secure to prevent disruption to care

Six Jobs Per Cycle. Each round makes the next smarter.

- 01 Context** Align business priorities, critical assets, regulatory requirements, and evolving threats
- 02 Strategy** Prioritize assets, risks, and testing approaches based on business context
- 03 Planning** Coordinate scope, methodologies, and researchers for effective testing
- 04 Execution** Combine automation and expert engineers to test your external attack surface
- 05 Interpretation** Deliver validated, prioritized insights for technical teams, leadership, and the board
- 06 Mobilization** Deliver actionable findings to the right teams through alerts and integrations

You're in good company

reckitt

"If we only take a snapshot twice a year, we may be compliant, but we're not secure. This isn't a compliance issue. It's about survival. Our partnership with SignalFisher dates back to 2021. They help us see our most pressing cyber risks through an attacker's eyes and understand what to do next – from engineering to the board perspective. That's priceless."

Sandra Känzig
CISO, Helvetia Baloise Group
Insurance

"We replaced point-in-time pentests with the Cyber Resilience Shield – enabling us to detect new vulnerabilities ~100x faster while testing our systems unmatched depth and coverage. We regained global visibility and now provide the board with clear, actionable insights – all while reducing costs up to ~90% compared with traditional pentests."

Noel Dunne
Cyber Security Director, Reckitt
Multinational consumer goods

Make the first move

The cybersecurity industry needs a hard reset to keep up with our ever-changing world. We help our clients adapt so they can feel ready and resilient for what comes next. If you're curious to know how, talk to us.
