

# Web Port

Create your building integration solution with the most appreciated SCADA-platform on the market.

Our independent building integration system, Web Port, combine all data, technical equipment, and systems from all properties with data from third-party applications and other parts of an organization.

# Superior flexibility and a fast learning curve

What makes **Web Port** special is its independence, scalability, and flexibility. Evolving over the past decade through close collaboration with integration partners and the diverse requirements of building owners, tenants, and policymakers, giving you more than the traditional HMI, BMS, or SCADA system.

With Web Port it is easy to connect, visualize, monitor, and create smart, customized solutions for almost any automation, energy efficiency, and reporting challenges.

We strive to offer you a building integration system with a fast learning curve that dramatically reduces the time spent on installation, operation, security, updates, and support.

## System architecture: **Secure and flexible setup**

### Cloud

Connect all equipment directly to the cloud, or a local installation that syncs up to the cloud—plus, the responsibility of updating cloud servers and software is on us.

### Local installation

Install Web Port locally on a PLC or PC to create offline redundancy. Access the building's HMI, save sensor data, make a local backup of the data.

## Drivers

Integrate Web Port into an extensive range of hardware and software via its drivers, open APIs, and webhooks. Our supported drivers enable communication between Web Port and external systems via various protocols.

## Tagging standards

Save time with our customizable data tagging standard. Web Port uses tags to associate technical addresses with an object-oriented name structure. This structure then acts as instructions for Web Port to perform a variety of clever automated connections. The tagging standard is 100% customizable to fit your or your customers' needs.

## Web Port is made for and with building integrators

Working closely with our partners over the past decade has resulted in incredibly flexible and efficient software that both partners and building owners appreciate.
