

Your Solution Partner for Metal Packaging

Foldable Wire Mesh Containers

It is the most widely used metal packaging type in production, storage and logistics processes, especially in the automotive sector. This type of packaging is constantly produced at ESC, can be delivered to its customers in the closest deadlines.

Advantages :

- Closed volume advantage is very high.
- Metal side walls can be opened or closed.
- Repair or maintenance costs are very low.
- It is easy to supply standard spare parts.

ESC002-004-007

Options :

- Plastic separator coating can be applied
- Sea play wood can be used instead of the base plate
- Wire mesh sizes can be customised according to demand

ETK20

ESC can offer you a large number of alternative solutions in wire metal packaging. It can apply the most optimum options to your products in the desired dimensions and carrying capacity.

Folding feature is now a very important element in Gitterbox type packaging. For this reason, our GT002 model will be a very good choice for you.

ETK36

GT002

ETK72

We recommend you to get an offer from our company for your company-specific wire packaging. Because ESC will offer the most competitive price offers to its customers in the desired quality.

Specific Racks & Containers

Special metal shelving is an indispensable element of the automotive and commercial vehicle sectors. Special racks are usually designed on a project basis and produced for the most ergonomic and economical transport and storage of parts between the main industry and the sub-industry. ESC is capable of manufacturing all kinds of special racks from design to mass production.

TOFAŞ K0 project series metal racks solutions

Togg T010 project series metal racks solutions

FORD Company V363 - H625- V710 Project Metal Packaging Solutions

Tarpaulin (Canvas) Covered Packagings

Canvas coated metal packaging is generally used for the transport of light and sensitive parts. It is generally preferred in the automotive sector and plastic injection lines. It is produced for stocking and transporting sensitive parts of vehicles such as headlight groups, bumper, torpedo.

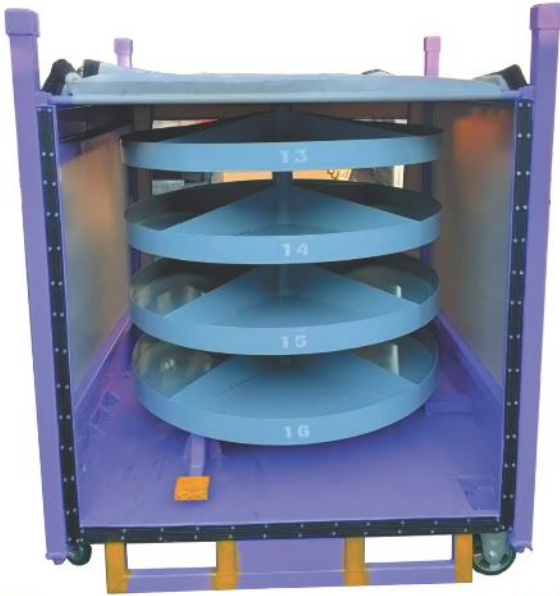

This type of metal containers also protects the production parts from external environments. They can be converted into wheeled trolleys according to customer requirements

Load carrier trolleys are used in cases where carriers such as forklifts are not required to enter the production lines. It is aimed to use the production lines in the most efficient way

We applied a rotary wheel mechanism inside the trolley. It is a very useful work in terms of efficiency & space & labour gains.

Transfer Carriers**

Front mudguard Transfer carriers

We produced hundreds of different load-carrying cars for the FORD factory

F007

SM62

Standard Metal Containers are packages suitable for very long time use thanks to their strong construction. Material thicknesses can be changed according to customer preference. Our company has an annual production capacity of 5000 units in standard metal container production. ESC can also be produced in standard metal cases special for their own lines in main industry companies. (FORD, TOYOTA, TOFAS, RENAULT)

ESK05

ESK37

Standard metal containers can also be produced as foldable according to customer demands.

A120

A120 sheet container is produced in our company as standard. Its dimensions can be changed according to the expectations of the customers. It is economical and has very high strength. Our customers can also purchase A120 sheet container by product rental method.

You can safely transport iron casting products in standard metal containers. You can have hot dip galvanised (Look: Hot Dip Galvanising Page).

Roll- Containers & Wire Mesh Baskets

These metal baskets are used for storage and transport of materials in many areas of industry. ESC can produce Roll Containers in desired sizes and carrying capacities. Painted or galvanised options can be applied according to customer preference.

T001

Dimensions : 770 x560x120

The T001 model is one of ESC's most preferred products. These baskets are stackable on top of each other. It has a very strong construction. It can carry 300 kg of material depending on its internal volume.

Roll-Containers

ESC has fully automatic wire processing machines. Wire mesh can be produced in desired sizes.

ETK60

ETK70

Our wire mesh baskets use very little space thanks to its folding feature. Spare part costs are very low. Standard spare part requests can be supplied in a very short time.

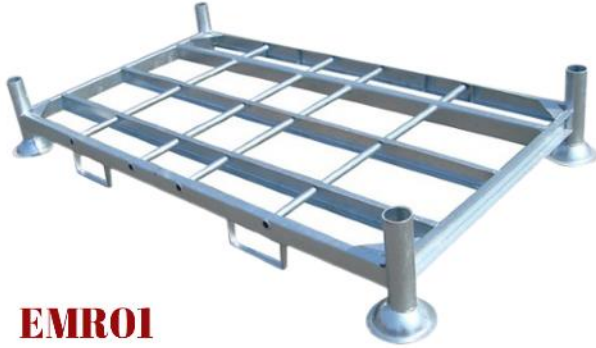

ETK75

Hot -Dip Galvanized Proseses

Mobile Shelves are the ideal choice for stocking your products in the most economical and simple way.ESC offers its Mobile Shelving products to its customers by coating them with Hot Dip Galvanising method.

EMRO1

All galvanising process certificates are provided to our customers together with the order delivery.

ESC can apply the galvanising process to all types of metal packaging.

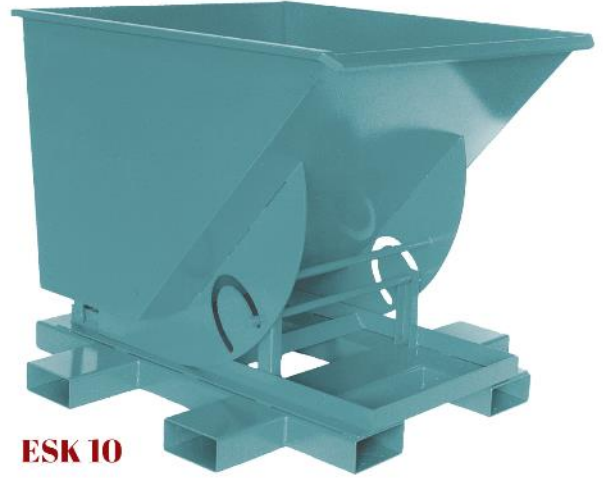

ESC provides its customers with hot-dip galvanised products in European Standards.

EPK16

EPC type containers are generally used in pressroom, sheet metal cutting departments. It has a very strong construction in accordance with its purpose. They are containers suitable for 3 ton load carrying capacity on unit m'2.

H610 Ford Truck Project

GNS 01 Truck Engine transport container

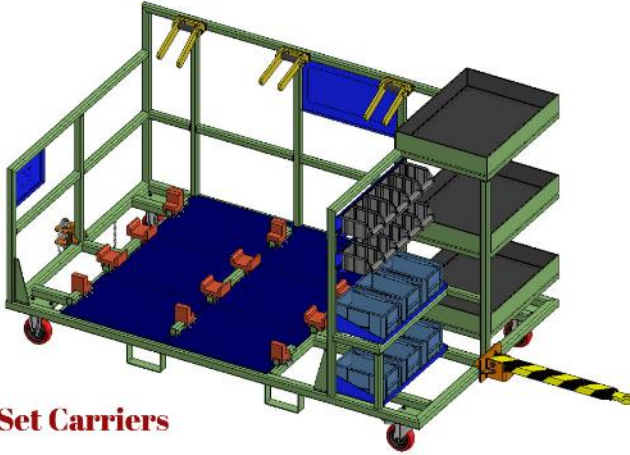

A special study for commercial truck seats

Our Projects & Prototipe models

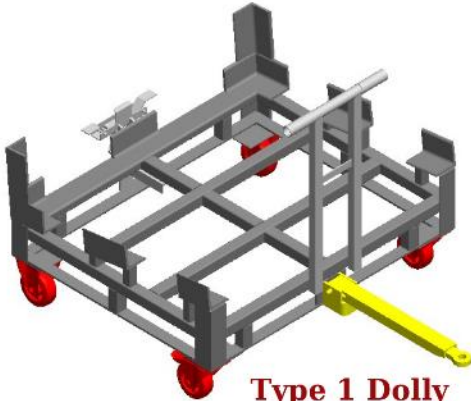

Compact material handlers are designed with wheels. The aim is to transfer several different reference parts to the line side.

Set Carriers

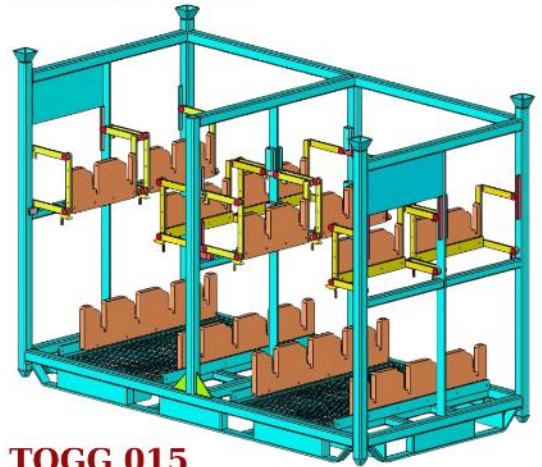

Type 1 Dolly's are designed to carry the existing standard containers in the Ford Otosan plant to the line edges.

Type 1 Dolly

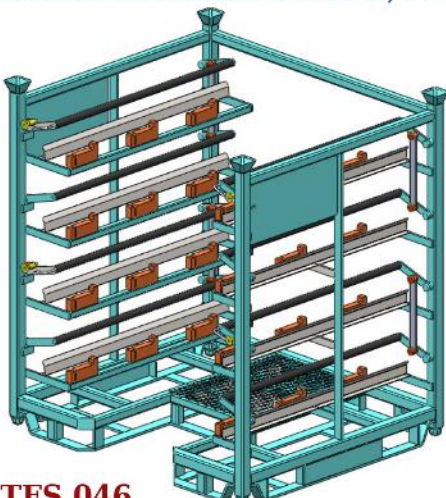

ESC has a strong technical project team specialising in metal packaging, special racks , containers and industrial load carriers. All details from the design process to the first sample production are followed by our Project team.

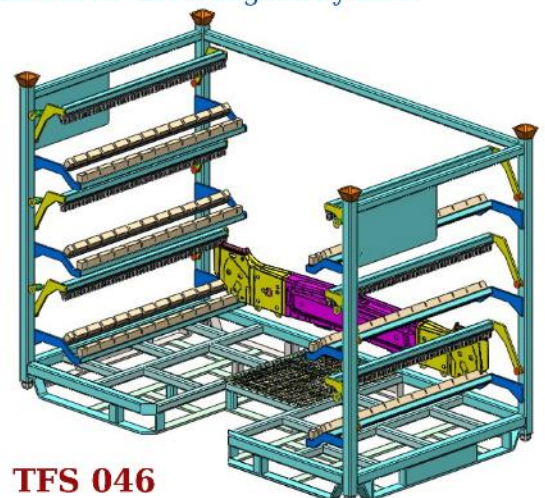

TOGG 015

Metal packaging projects and prototype productions of many automotive and commercial vehicle manufacturers such as FORD, FIAT , TOYOTA, TOGG , RENAULT are designed by ESC.
