Schüco at FENSTERBAU FRONTALE 2026

Cross-material system range and high-performance service portfolio

Bielefeld/Weißenfels. At Stand 7-507 in Hall 7, the Schüco exhibition team will welcome its visitors in an inspiring, feel-good atmosphere. A comprehensive range of new and proven products for private and commercial residential projects will be showcased – not just for newbuild properties, but also focusing on the renovation of existing buildings. Another strategically important exhibition area is the Schüco consultancy and service offering throughout the entire value chain. Everything here centres around Schüco partner companies, which therefore includes the services and digital tools that are available for planning, calculation, fabrication, installation, maintenance, servicing and dismantling.

Schüco is addressing the economical and ecological challenges it is facing head-on, setting current trends in the construction industry, standardising visions and creating planning and fabrication reliability for its partners. This power of innovation across all areas of the company can be seen and felt at the exhibition stand in Nuremberg.

Stand areas for orientation

To provide thematic orientation, the exhibition stand is divided into individual subject areas. In the “Private residential construction” area, Schüco will present its cross-material system range for the construction of windows, doors and sliding doors with additional, integrated functions. These also include a wide variety of integrated sun shading options and wireless sensors. The focus in the “Private residential construction” exhibition area is on floor-to-ceiling windows and sliding doors, for modern family homes that are flooded with light. In addition to presenting new system solutions from the Schüco **Living** family, the

new additions to the Schüco Focusing platform – Schüco Focusing MD (centre gasket system) and Schüco FocusingSlide – are also being introduced. The latter is a new large-scale lift-and-slide door with a 70/167 millimetre basic depth, variable opening widths and a range of design options for maximum light penetration.

The “Commercial residential construction” area focuses on cross-material, multi-storey residential construction for both newbuilds and renovations. The exhibition stand features, among other things, a cross-material exhibit showcasing the visual fusion of material and function, presenting examples of unit combinations made from PVC-U and aluminium that are commonly used in this market segment. Two further exhibits are also located in this area which demonstrate the ability of Schüco PVC-U units to reduce CO₂-e for climate-neutral construction today and in the future. A study dedicated to the specific climate challenges of the future also shows how the building envelope specialist is addressing the predicted environmental scenarios of the future and working on solutions to protect people and property.

The presentation of the range of services is another strategically important area. It focuses on digital tools and machinery, marketing and sales services, the Schüco maintenance and repair service and the recycling service from RE:CORE. This recycling specialist was founded in 2022 as a joint venture of Remondis and Schüco, with the aim of making a real contribution towards a sustainable construction industry by establishing a closed PVC-U material cycle. RE:CORE has since expanded its recycling services to include aluminium, steel and glass.

With this portfolio of products and services throughout the entire value chain, the company offers its partners customisable no-hassle packages in a reliable and future-oriented partnership.

Schüco – System solutions for windows, doors and façades

Based in Bielefeld, the Schüco Group develops and sells system solutions for the building envelope made from aluminium, steel and PVC-U. The product range includes window, door, façade, ventilation, security and sun shading systems as well as smart and networked solutions for residential and commercial projects. Schüco also offers

consultation and digital solutions for all phases of a building project – from the initial idea, design, fabrication and installation all the way through to the after-sales service including maintenance and servicing. Fabrication machinery and excellent customer service complement the product range. As a leading company in the construction industry, Schüco is committed to being a pioneer in holistic sustainability and using its products and services to make an active contribution towards achieving climate neutrality and a circular economy in the building trade. Founded in 1951, Schüco is now active in more than 80 countries and achieved a turnover of 2.05 billion euros in 2024 with 6850 employees. For more information, visit www.schueco.com

The Schüco FocusIng PVC-U system features an impressively modern look, a high proportion of recycled material and excellent thermal insulation values – now available with a centre gasket too.

The new Schüco FocusIngSlide offers versatile, large-scale design options to flood interior spaces with light.

Thanks to three continuous gasket levels, Schüco Focus**Ing** with a centre gasket achieves outstanding thermal insulation with a U_f value of $1.0 \text{ W}/(\text{m}^2\text{K})$ and a U_w value lower than $0.80 \text{ W}/(\text{m}^2\text{K})$ with the appropriate triple glazing.
