pet food industry at a
glance

Hybrid Air Technology

The machine systems impress not only with their robustness and sustainable quality but also with their unique technology – the Hybrid-Air-System, which provides our customers with a significant competitive advantage.

Competitive advantages:

- shorter process times
- higher output
- energy savings
- faster drying
- absolute uniformity with higher trolley loading

In contrast to a conventional drying system, our horizontal air circulation ensures more efficient heat transfer. Additionally, the high air exchange rate guarantees the fastest possible dehumidification of the products being treated. This is possible with both hanging and lying trolley loading.

By precisely adjusting the humidity parameters and temperature control, 100% consistent reproducibility of the processes is ensured.

Optionally available with a smoke system.

Cleanline System and Transport Washing System KRW 1

Cleanline

High-tech for maximum performance:
Cleanline tunnel washers.

The Cleanline tunnel washers are specifically designed for cleaning heavily soiled grids, crates, and equipment.

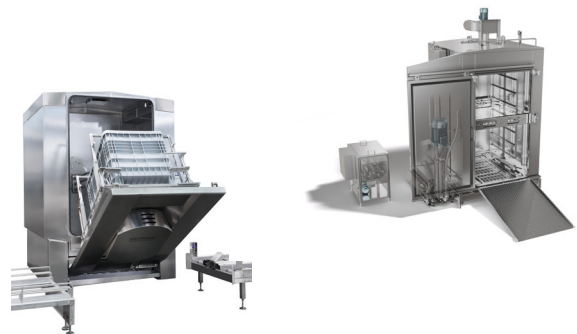

The hygienic design of this system type meets the stringent hygiene regulations of the food industry.

Your advantages:

- Fast and efficient cleaning and drying
- Economical and environmentally friendly
- Easy cleaning of the system
- Modular design
- Increased uptime due to efficient filtration system
- Efficient pressure in the main washing module
- Available with steam or electric heating

Washing System KRW 1 Transport Washing System KBW202 Pallet Box Washing System KBW 800/801

The front-loading washing systems are suitable for cleaning transport containers, trolleys, and large containers.

Your advantages:

- Energy and cost-saving
- Fast and efficient cleaning
- Unique nozzle systems remove even stubborn dirt
- Environmentally friendly and economical
- Individual programming for each type of wash load
- Also available as tunnel systems
