**3T** electronics & embedded systems

for
Mission Critical Applications

CO-DEVELOPMENT SERVICE
Electronics & Embedded systems

Core competences	Typical applications	Main application fields
– Analog & mixed signal	– BLDC sensorless motor control	– Semiconductor equipment
– Embedded software	– Real-time data processing & control	– Uninterruptible Power Supplies
– FPGA applications	– Reliable control systems	– Medical devices
– Model-driven development	– High-speed communication	– Smart buildings
– Power & motion control	– High-efficient power converters	– Rescue equipment
– Test systems	– Hardware acceleration	– Radar Tracking systems
	– High-precision sensor interfaces	– Safety systems
