

SINBRAN® – SINTERED MEMBRANE FILTRATION

SINBRAN® stands for pioneering spirit, reliability, and technical excellence. Founded at the turn of 2013/2014 by Wolfgang Jander, the company emerged from a management buyout of the SINBRAN® division of W. L. Gore & Associates GmbH – with the aim of independently advancing a unique technology.

The success story of SINBRAN® is inseparably linked to **Wolfgang Jander**. With more than 40 years of experience in industrial dust collection and 27 years at W. L. Gore, he played a decisive role in the development, market launch, and international establishment of SINBRAN® technology. As Business Leader, he was responsible for the global filtration business before laying the foundation for a new era with the creation of Sinbran GmbH.

Anke Content strengthens the company as a sales and application specialist, bringing passion and precision to her work. She gained valuable experience in technical sales of industrial capital and consumable goods, and at W. L. Gore she was responsible for application consulting and later for sales of filter bags and SINBRAN® filter elements. Today, she embodies customer focus, solution-oriented thinking, and sustainable business development at SINBRAN®.

Since 2023, **Marc-Antoine Peter** has been driving Sinbran GmbH's market presence as General Manager. He brings extensive experience in production, manufacturing, and sales of technically sophisticated industrial products and combines this expertise with a clear vision for growth and internationalization. With strategic foresight and enthusiasm for innovation, he positions SINBRAN® as a reliable and forward-looking partner in the global market.

Together, Wolfgang Jander, Anke Content, and Marc-Antoine Peter unite decades of expertise in industrial filtration and manufacturing. Yet SINBRAN® is more than the sum of this experience: the company sees itself as a partner that empowers customers to break new ground through technical excellence, tailor-made solutions, and innovative strength.

With uncompromising quality, continuous development, and a clear view of the future, Sinbran GmbH sets new standards in industrial dust collection – and actively shapes the future of filtration technology.
