

Automating Trust: Navigating the Changes of PKI with Confidence. It-sa 2023 Special.

GMO GlobalSign and m2trust have launched a joint information campaign for it-sa 2023 under this headline.

The benefit for companies

GMO GlobalSign is one of the world's most deeply-rooted certificate authorities and the leading provider of trusted identity and security solutions. m2trust is one of Europe's leaders in highly automated digital certificate lifecycle management. We have combined our strengths for it-sa 2023. In a series of webinars, we presented the advantages of high-quality, deeply validated digital certificates (GMO GlobalSign) and their mass, highly automated life cycle management (m2trust). For companies, this is a particular advantage: the two solutions from GMO GlobalSign and m2trust work seamlessly together. This is a one stop store approach.

Awareness to Trust and Cybersecurity

The higher the cybersecurity requirements of a company increase, the stronger the regulatory requirements become, the more automated processes become, the more secure the data exchange must become. The means of choice here are digital certificates. The more a company uses them, the faster they are replaced, the stronger the protection against attacks from the Internet.

Meet us @ it-sa 2023

Meet us at it-sa 2023, we invite you to join us at the booths and our joint 15 min pitch, where we will explain the top level benefits of both solutions in a short and crisp way.

Speaker Platform Hall 6 | Thursday, Sept 12th | 1pm CEST

We will be happy to listen to your needs and then immediately see what our solutions can offer you to meet them.
