2025 Customer Survey.

As part of our annual customer survey, we asked how we can help you achieve your sustainability targets in 2026. The following were your replies in priority order.

Carbon Footprint.

Can you measure the Carbon Footprint of our existing packaging?

We will provide a FREE Packaging Carbon Footprint (PCF) analysis. Ideally, in order to accurately reflect the PCF, this should be undertaken as part of a Sustainable Packaging Audit.

Alternative Films.

“ Can you provide more information on alternative biodegradable, recyclable & compostable films? ”

Once again, suitable alternative films can be recommended as part of a Sustainability Packaging Audit. Alternatively, attendance at a Packaging Technical Training workshop considers the full range of alternative films.

Extended Producer Responsibility

“

Can you offer more information on extended producer responsibility (EPR) and the packaging and packaging waste regulations (PPWR)?

”

Individual Company Presentations are available on request, as the impact of EPR and PPWR on cost in companies will vary. For a comprehensive overview please ask for an Individual Company Presentation.

Science Based Target Initiatives.

What information can you provide about Science Based Target Initiatives?

Achieving these poses a challenge to all aspects of carbon footprint reduction, as the industry moves towards net-zero, and the individual scope of 1, 2, 3. Again, please ask for an Individual Company Presentation.

Sustainability Packaging Audit.

Designed to improve sustainability, productivity, and take costs out of the system, our Sustainability Packaging Audits look at many ways in which we can achieve this.

Workshops.

Technical Training Workshop & Sustainability Workshop

From developing technical packaging knowledge and learning more about film and print, to receiving the tools needed to protect and preserve products, without causing harm to the environment, our workshops are designed to help.

Please ask to book your place.

Flexible packaging. Sustainable solutions.
