

PILLOW BAG MACHINE SB

One machine – three options

According to customer's wishes and requirements, the machine can be equipped with a forming shoulder to suit the product.

LARGE FORMATS

- Pillow bags with a capacity from 5 kg to 15 kg
- Alternative to filling buckets
- Optional large formats with spout possible

Conventional materials
Recyclable materials

MEDIUM FORMATS

- Pillow bags with a capacity up to 5 kg
- Airless filling (no addition of preservatives or gassing is necessary)

Conventional materials
Recyclable materials
Garden compostable materials

STAND-UP POUCH

- 2-lane filling of Doypacks
- 4-lane on request

Conventional materials
Recyclable materials
Garden compostable materials

SUSTAINABILITY IN AND FOR PRODUCTION

POWER OF THE MARKET

The market is constantly demanding more products with recyclable or compostable film. GKS packaging machines can basically pack all liquids in these films, with minor adjustment of the temperature and sealing pressure parameters. Pressure tests at 2 bar and endurance tests lasting 9 months were carried out in customer laboratories and successfully completed.

POWER OF THE SUN

A PV system was installed on the roofs of our production halls, which generates the electricity required for production in an environmentally friendly and emission-free manner.

E-MOBILITY

Transformer housings built by GK Sondermaschinenbau in cooperation with E.ON are used for the protected accommodation of the power supply unit of charging stations for electric scooters.
