

USE CASE

Supply Chain Cyber Risk

Take control of cyber risk in your extended ecosystem

As organizations scale and leverage more vendors and third-party relationships, the risk of cyber threats rapidly grows. SecurityScorecard's Supply Chain Cyber Risk Solution brings everything your team needs into one platform to proactively monitor risk, communicate threats, and reduce the risk of compromise from vendors and business partners.

Products

Third-Party Cyber Risk Management

- Gain a complete understanding of risk across your supply chain with overview pages updated in real time
- Be alerted when new issues are found to remediate cyber risks in your supply chain
- Leverage AI to shorten the questionnaire process by as much as 83% and facilitate more precise, secure interactions with vendors
- Stay compliant with industry regulations by utilizing comprehensive, evidence-based intelligence and reporting

Automatic Vendor Detection

- Leverage AI-driven analytics to identify 4th parties in your ecosystem that pose risks
- Streamline collaboration with vendors to resolve critical issues
- Detect hidden risks and identify unknown vendors across your ecosystem
- Get the same view of your network that your vendors have to mitigate risk rapidly

Supply Chain Risk Intelligence

- Eliminate your weakest links by pinpointing high-risk vendors
- Gain full context from our intelligence team on malware, breaches, and other cyber incidents

SECURITYSCORECARD AT A GLANCE

**One platform:**

Monitor threats, collaborate with vendors, share reports with stakeholders, and reduce risk

**The world's most trusted security ratings:**

Pinpoint potential risks across your extended supply chain with our intuitive A-F ratings

**Actionable recommendations**

for you and your vendors to remediate quickly and strengthen your network

**Pure data:**

Gain context about your cyber risk and vendors with robust data and transparent methodology

- Leverage standardized scoring methods, including security ratings, CVSS scores, and CISA KEVs
- Prevent reputational damage, legal liabilities, and compliance consequences
- Share actionable findings with vendors, prioritize vulnerabilities, and reduce your exposure before breaches occur

Services

Operationalize Supply Chain Risk Management

MAX

Save time and money with a team of security experts at your service

- Alleviate the day-to-day management of third-party cyber risk and close the cyber talent gap
- SecurityScorecard experts handle vendor management and communication on your behalf by uncovering risk, analyzing and understanding threat exposure, and taking action with your vulnerable vendors
- MAX identifies and remediates critical vulnerabilities that could otherwise leave you exposed, fixing the problem for all connected parties
- Use real-time, easy-to-understand reporting and enable your security leaders to communicate their success to the board

Zero Day as a Service (ZDaaS) Against Zero Days

- Be alerted to potential Zero Day vulnerabilities as they emerge
- Get monthly reports detailing potential vendors impacted, including IP address
- Assess your organization and dependencies for potential impact to a Zero Day vulnerability or critical CVE

MAX's ability to identify a wide range of cybersecurity concerns across our global vendor landscape, and in turn, partner with those vendors to improve, is a significant win for both McDonald's and our vendors.
