

Tree Urn

Patented innovation

Pour out the ashes

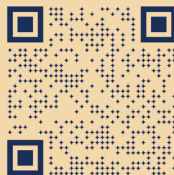

Keep the urn

Replace the lid,

Feel free to add
the sapling later

Keep your urn
for as long as you want,
Such as a standard urn.

User guide Video

Add the Tree

Add the sapling to the urn and fill with soil.

The planting of your tree in the urn follows a process similar to that used for traditional pots.

↓ Place the urn in the ground ↓

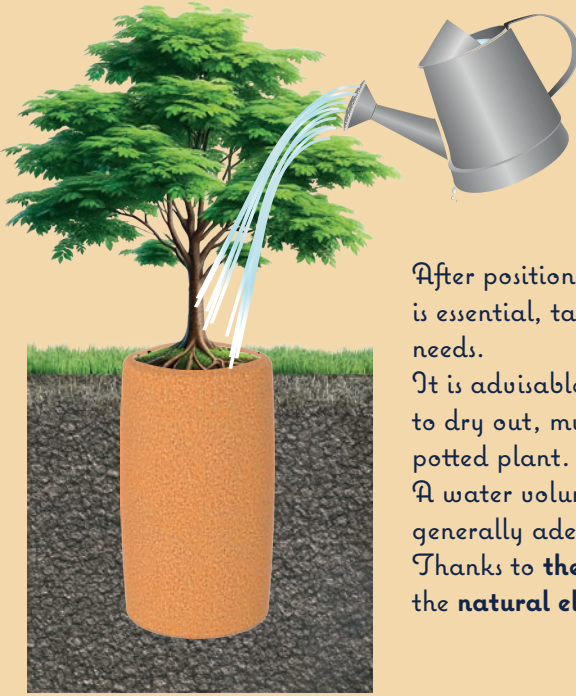

If you wish to keep the urn above ground, on a terrace, in the garden, indoors or elsewhere, place it **in a Planter** covered with soil.

Once the final location is chosen plant the urn **in the ground**, where the tree can reach its full size and grow over time.

Watering & Growing

After positioning the tree in the urn, regular watering is essential, taking into account the tree's specific water needs.

It is advisable to water when the soil in the urn starts to dry out, much like you would with a standard potted plant.

A water volume of 30 centiliters per watering is generally adequate.

Thanks to **the properties of cork**, the urn allows for the **natural elimination of any excess water**.

Choosing a young tree instead of a seed or sapling is a thoughtful decision. It offers you the flexibility to plant the urn in the ground wherever and whenever you choose, with the advantage that a young tree is more capable of acclimatizing and thriving in its new environment **without the risk of growth failure**.

A few weeks after planting, the tree's roots will begin to draw **their nutrients from the ashes**, which are rich in PH and necessary for their growth.

Then, within a period of 1 to 2 years, once the tree has reached a certain maturity, the roots will break through the urn to spread into the soil, and the urn, made up of 90% cork and 10% food-grade glue, **will naturally deteriorate** over the following years (6 to 10 years).

is a **patented ecological innovation** designed to receive ashes and integrate them into the root system of a young tree, in order to nourish it and ensure its growth while contributing to the health of our planet.

This urn made in Spain from **recycled cork** is designed to biodegrade naturally without harming the environment.

Cork is an exceptional natural material, renewable and biodegradable.

Thus, memory forests can be created, offering loved ones a living and soothing space for reflection.

Choosing a Tree urn is a concrete way of leaving a positive mark on the earth a true symbiosis between your pet memory and nature.

The Tree urn embodies the beauty of the life cycle, where each ending can be the beginning of a new story.

The Tree Urn represents a steadfast commitment to environmental stewardship and the circular economy, embodying the principles of recycling, reducing carbon footprint, and natural biodegradability.

This choice reflects our desire to cultivate new green spaces, the vital lungs of our Earth, while offering a warm, high-quality, and unique experience.
