

OUR RESPONSIBLE COMMITMENT

Nidaplast, a renowned company, has invented numerous innovative solutions that have transformed the sectors of rainwater management, reinforcement and stabilisation of permeable soils, and lightweight backfill.

We pride ourselves on our commitment to quality and innovation. We work closely with our customers to understand their specific needs and develop tailored solutions that meet their expectations.

Recycling and recyclability

Nidaplast are committed to developing and increasing the use of recycled materials in the design and manufacture of our products. Every year since 2019, our company has been awarded the first European certification that promotes the circular economy actions of plastics manufacturers, and the integration of recycled plastics in production processes. The MORE award (MOBilised for REcycling) salutes our commitments to reducing the environmental footprint of producing our products by promoting the use of recycled raw materials.

Quality, safety and environment

For more than 20 years, we have been leading a strong certification process.

Our company is QSE-certified:

ISO 9001 Quality.

We are committed to a management policy aimed at measuring the effectiveness of our services. Our employees are involved in a continuous improvement process to meet our customers' quality requirements and needs.

ISO 45001 Safety.

We have implemented a prevention approach and developed a safety culture within our company, to reduce risks and foster better, safer working conditions for our employees.

ISO 14001 Environment.

As we are aware of what is at stake, we are committed to continuously ameliorating the impact of our activity on the environment. Energy performance is also at the heart of Nidaplast's development through regular investment in modern, energy-efficient equipment.

Our community commitment: Coq Vert Pathfinder

In February 2023, "as an exemplary member of the community", Vincent Pirson, director of Nidaplast, was elected "Coq Vert Pathfinder", from around a hundred scouts in France.

Trained in various ecological and energy transition support mechanisms, he has become a true community ambassador. He actively participates in promoting good environmental practices and community exchanges by meeting regularly with other members.

His mission is to identify and raise awareness among other companies that are relevant and open to ecological transition issues, so that they join the community themselves.

The French Fab

Since 2022 NIDAPLAST has been certified as a French Fab company, following significant investments in its production facilities on French territory. Nidaplast is part of the community of industrial companies or industrial services providers that manufacture in France. These ambitious companies plan for the future, and are committed to growing, innovating, and developing their business internationally. These companies are committed to local communities for the long term.

These SMEs, agencies and major companies create jobs and have the capacity to reinvent themselves and adapt to changing realities.

What's the «Coq Vert»?

The «Coq Vert» (*Green Rooster*) Community comprises leaders who are convinced of the need to act and are already committed to the environmental and energy transitions.

Launched by Bpi-France, in partnership with ADEME and the Ministry of Ecological Transition, this Community promotes expertise-sharing between committed entrepreneurs.

Nidaplast, committed since 2022

Nidaplast is one of the first French companies to have been selected as a member of the «Coq Vert» community.

The selection of Nidaplast within this community was studied and validated by Bpi-France and ADEME.

"Our products are making a contribution to the ecological transition edifice. Our mission is to continue to innovate, for a greener, more climate-resilient urban environment."
Vincent Pirson
