

Greaseproof paper for general wrapping

28–70 gsm

- The food maintains its flavour, aroma and appearance as the paper allows the foodstuffs to breathe.
- Great replacement for multilayer materials, such as paper laminated with polyethylene film.
- For applications demanding high-temperature resistance, an HT (high-temperature) grade is available.
- The paper is available in reels, ream-wrapped sheets, cartons or bulk-packed on pallets.

Application:

- packaging of hamburgers, wraps and baguettes in fast food / quick service restaurants
- sandwich / deli wrap paper
- tray and basket liners
- decorative cake doilies
- cheese wraps and interleaves
- packaging of butter, margarine, and other edible fats
- sausage, salami, and cured meat wraps, displays and interleaves
- wrapping of minced meat
- pizza box liners

Paper for cupcake cases

32–70 gsm

- Reliable grease resistant paper for converting to baking cups.
- Special treatment of the paper surface enables smooth denesting during cup cutting and handling.
- The paper is designed to withstand high temperatures achieved in ovens – up to 220 °C (430 °F)
- The paper is available in reels, ream-wrapped sheets, cartons or bulk-packed on pallets.

Application:

- baking cups for lining muffin and cupcake pans
- cake and loaf tin liners
- serving of pastries and Balkan sweets
- cups for chocolates and pralines

Laminating base paper

28–70 gsm

- Reliable functional layer of composite packaging materials.
- One side of the lamination base paper is equipped with functional properties, while the other one is optimally adapted for gluing with wax and starch adhesives, whether aqueous or solvent-based.
- KH PACK® serves as a versatile substrate for laminating to aluminum, plastic film, cardboard or paperboard.
- Our long-time experience in the manufacturing of lamination base papers allows us to give informed recommendations and to adjust the properties of the paper to meet the specific requirements of your particular converting processes and your packaged food.
- The paper is delivered in reels slit to your desired size.

Aluminium foil laminated paper:

- packaging of butter, margarine, and other edible fats
- quark wraps
- soft cheese wraps
- yeast wraps
- bouillon wraps
- chocolate and candy bar wraps

Microflute paper

28–70 gsm

- Suitable for the production of microflutes used as protective liners and cushion pads in confectionery packaging.
- The paper can serve either as a functional inside-facing layer of the outer packaging or as both the fluting liners and medium of corrugated inserts and inner packaging.
- The paper has enhanced strength properties, adjustable crush resistance, and considerable grease and water resistance.
- One or both sides are adapted for joining to other layers of paper.
- For applications demanding high-temperature resistance, an HT (high-temperature) grade is available.

Application:

- chocolate box cushion pads
- Swiss roll packaging
- corrugated protective sleeves for biscuits
- trays and liners for sandwich wraps
- paper baking moulds / loaf pans

Paper for bag-making

28–70 gsm

- Suitable for converting to bags for a wide range of food packaging applications containing fat and moisture.
- A great feature of our greaseproof paper compared to other packaging materials is its air permeability allowing the food to breathe and thus preventing a rapid loss of flavour and visual appeal.
- Easy to process, reliably glueable and also suitable for flexograph and offset printing.
- For applications where high-temperature resistance is important, an HT (high-temperature) grade is available.

Application:

- fast food bags and pouches for French fries, burgers, wraps, hot dogs, sandwiches etc.
- bakery bags for wrapping of bread, rolls, bagels, and sweet and savory pastries
- deli bags
- bags for sausages
- bags for cookies and chocolate candies
- lunch bags

Paper for waxing and extrusion

28–70 gsm

- Paper provides the perfect substrate for waxing and polyethylene extrusion coating applications.
- It shows the ideal properties for coating and production of packaging materials with wax and PE
- The paper is designed for direct food contact in accordance with the strictest European regulations.

PE-coated paper:

- packaging of sausages, salami and cured meats
- butcher wraps, packaging of raw and minced meat
- packaging of bread and filled pastries

Waxed paper:

- packaging of candies, lollipops and other sweets
- chocolate wraps

Printed wrapping

Packaging papers with individual design help products to distinguish from others. We provide printing on a flexo printing machine enabling random print or registered print.

Up to 8 colours may be involved on one pass. All paper substances from our portfolio can be printed as well as other papers in paper substances in range of 28 – 180 gsm. Let our sales team and print enthusiasts help you amaze your customers with a colourful experience.

KH PACK® PAPERS

Greaseproof and barrier papers are ideal packaging materials for food containing fat and water. Paper is specially treated to prevent penetration of fat and moisture into or through the paper structure, thus preserving wrapped food as well as printed packaging. Our KH PACK® papers have a wide range of applications in the food packaging industry. They are designed and certified for a direct food contact. Common applications include food service wraps, paper bags and laminating with other materials where KH PACK® paper serves as a functional layer of a composite packaging.

KH PACK® range represents white, woodfree, machine finished (MF) papers. With excellent processability and printability.

INTRODUCING THE ERA OF PFAS-FREE PACKAGING SOLUTIONS

KRPA PAPER, a leading producer of specialty papers, offers creative answers to all your sustainable food packaging needs, including the option of grease-resistant papers without PFAS. We are pleased to offer following qualities:

KH PACK PURE

Fluorine-free wrapping paper with wet strength property, primarily designed for wrapping of food with lower grease content.

KH PACK SUPREME

Fluorine-free greaseproof paper intended for direct wrapping, paper bags production and also lamination with further materials.

KH PACK SUPREME SE

Fluorine-free greaseproof paper with a specially treated surface, intended for the production of baking cups.

We are experts *in manufacturing of specialty papers*

We are a leading Czech manufacturer of specialty packaging paper. We develop and produce greaseproof, barrier and other custom-made papers. Paper converters, who make direct food packaging, are our main customers.

Our paper is processed to achieve suitable resistance properties. High resistance papers are chemically treated. This is currently the best way to make paper resistant to oil and water. Though our portfolio includes various resistance grades, fluorine containing or fluorine free treatment, one or both side coating and many other modifications.

Wide range of related services are offered – printing, surface treatment, cutting, slitting and rewinding. We provide complex customer support, from selecting suitable paper for given application to its smooth introduction into client's production.

We are an environmentally and socially responsible company. Sustainable using of natural resources and energy efficiency is in our highest priority. Maximum attention is given to latest findings on food packaging safety and good manufacturing practices.

Join us – one of a leading European specialty paper producers – and build with us upon a continuous papermaking tradition started nearly 190 years ago.

greaseproof papers

KH PACK® papers comply with internationally recognized norms on food safety – above all:

- **EU Regulation (EC) No. 1935/2004**
- **German Recommendation BfR No. XXXVI or XXXVI/2**
- **US FDA, CFR 21 §176.170 and §176.180**

„Our paper's compliance with the regulations is assessed by independent institutions such as ISEGA, FABES and PTS.
